CORTEC-REVOLUTION SYSTEM

Revolutionising the future of corrugated board packaging:

- How it's made
- How it's sold
- How it's recycled

Our **Cortec-Revolution** paper system produces the material used in the production of Oko products. Cortec-Revolution is the world's most environmentally friendly paper system. Through our patented technologies and designs which require no heat, we reduce CO2 emissions by up to 95% compared with common corrugated board manufacturers. **Zero Heat input** enables many things to be done with our board which cannot be done with traditional corrugating methods.

One of the many unique features of **Cortec-Revolution** system is that it produces a V-shaped flute, which we call the **V-Strong flute**. The flute shape which is stronger than the traditional arched shaped corrugated board flute, is folded at ultra-high speed. By folding the flute, we have been able to substantially reduce system engineering and size compared to traditional corrugating machines.

Cortec-Revolution systems are compact and mobile. They are built into 40-foot shipping containers and can be easily situated just about anywhere to make 2-3 & 5ply board, including OEM hole in the wall locations and local to industry.

Oko food packs are designed for and used in the **circular economy**. They are made from earth-friendly, recyclable, compostable materials.

Transparent windows are made from BioPBS or **cellulose film**, which is plant-based & compostable. Both turn to dirt in around 180 days when composted. Oko materials can be processed through the recycle stream.

We hope you like our designs. If you can't find a product which suits your requirements, please let us know and we will try to find a solution for you!

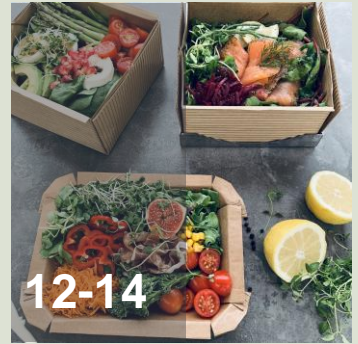

We are delighted to share our new products brochure with you. Öko sustainable food packaging is not only plastic-free, but it is also made from unbleached paper, recyclable, compostable, waterproof, greaseproof & food-friendly. Custom printed sleeves available.
